Revision 3.1 1 of 21 6/2012
Purpose and Scope

This Right-of-Way Use Restrictions Specification (hereinafter called “Specification”) has been developed by Buckeye Partners, L.P. and Affiliates (hereinafter called “Buckeye”) and is intended for landowners, utility owners, general contractors and their sub-contractors, pipeline/utility contractors, real estate developers, brokers and agents, lending officers and title underwriters, engineers, architects, surveyors, and local / governmental elected staffs (hereinafter called “Crossing Party”) as a guideline for the design and construction of proposed land development.

Buckeye appreciates this opportunity to work with you in the planning stages of your development (or construction activity), and we look forward to working with you proactively. Buckeye’s primary concern when activities are taking place near our pipeline is public safety and environmental protection. The intent of this Specification is to provide a clear and consistent set of requirements that will: (1) reduce the risk of damage to our pipeline and related facilities; (2) ensure unencumbered access to our right-of-way and pipeline facilities and the availability of adequate workspace for routine maintenance, future inspection, and/or repair work on our pipeline; and (3) enable the effective corrosion protection of our pipeline.

All such activities and projects that are performed near Buckeye’s pipeline facilities are subject to formal review by Buckeye prior to issuance of final written approval. Depending on the scope of the project and its impact on Buckeye’s pipeline facilities, additional engineering requirements and protective measures may apply. The following requirements are not only the policy of Buckeye, but comply with regulations set forth by the United States Department of Transportation, Safety Regulations, 49 CFR, Parts 192 and 195.

We want to be a good neighbor, but to do so requires us to act responsibly in protecting our right-of-way and preventing damage to the pipeline system. While we want to make every effort to accommodate your desired use of your property, our responsibility for public safety is paramount. Through proper planning and communications, we can ensure the safety and integrity of our pipeline system and the welfare of our neighbors.

The transmittal of this Specification does not constitute Buckeye’s approval or permission for the Crossing Party to begin construction or work within or across the pipeline right-of-way. Work may not commence until written authorization approving such work has been issued by Buckeye.

1.0 General Guidelines

1.1 The safety of the pipeline must be considered at all times. No attempt to probe for or engage in any construction activities which might damage the pipeline is permitted.

1.2 Before any preliminary field work or construction begins in the vicinity of Buckeye’s pipeline, a determination of the exact location and elevation of the pipeline must be made. To coordinate this procedure, please contact our local Field Operations Manager at the Buckeye facility nearest to your proposed project (see Attachment 1 for a listing of Buckeye’s facilities and telephone numbers).
1.3 All proposed drawings/plans must be submitted to Buckeye's Right of Way Department for review to determine to what extent, if any, the pipeline or right-of-way will be affected by the proposed construction and/or development. These drawings/plans must be prepared in strict compliance to Attachment 4, “Requirements for Submission of Design Plans”.

1.4 When any construction activity is conducted in or around our pipeline right-of-way, Buckeye's On-Site Inspector must be present at all times. **NO WORK SHALL TAKE PLACE WITHOUT A BUCKEYE ON-SITE INSPECTOR PRESENT.** For this free-of-charge service, contact our local Field Operations Manager at the Buckeye facility nearest to your proposed project.

1.5 The Crossing Party shall contact Buckeye for re-marking of a pipeline if the existing markers are inadequate for any reason, including disturbance due to construction activities.

   Note: Federal law prohibits the removal of pipeline markers.

1.6 The Crossing Party shall not burn trash, brush, or other items or substances within 50 feet of the pipeline.

1.7 The Crossing Party shall not store any equipment or materials on the right-of-way.

1.8 During routine or emergency maintenance on the pipeline, the cost to restore approved surface improvements (e.g., pavement, landscaping, sidewalks, etc.) shall be the responsibility of the Crossing Party.

2.0 **Excavation and Construction Restrictions**

2.1 Excavation operations shall be performed in accordance with appropriate State “One-Call” utility locating system requirements. As a matter of State law, anyone undertaking excavation work is required to call three (3) working days before excavating in MA, MI, NJ, PA, and TN; two (2) working days in all other states (see Attachment 3 for State “One-Call” numbers).

2.2 The Crossing Party will conduct “white-lining” of any proposed excavation areas. Buckeye will erect temporary pipeline markers/flags (yellow) identifying the location of the pipeline within the work area, and will provide information on how to respond should the pipeline be damaged or a commodity release occur. All personnel operating equipment over or around the pipeline must be made aware of its location and what to do if they make contact with the pipeline.

2.3 When a Crossing Party excavates near Buckeye’s pipeline, a Buckeye representative must locate the pipeline and determine the depth of cover before the Crossing Party begins excavation. The Buckeye representative and the excavator must review and complete an Excavation Safety Checklist (Attachment 8). The Crossing Party shall not perform any excavation, crossing, backfilling, or construction operations until Buckeye’s On-Site Inspector has reviewed the proposed work on site and given approval for work to proceed. Buckeye’s On-Site Inspector shall have full authority to stop the work if it is determined that the work is being performed in an unsafe manner.

2.4 No equipment shall work directly over the pipeline. The Crossing Party shall install temporary fencing along Buckeye’s right-of-way boundaries so that equipment will not inadvertently pass over the pipeline at locations other than those established for crossing (see Section 3.6).

2.5 When excavating within the right-of-way, the Crossing Party's backhoe shall have a plate welded over the teeth of the backhoe bucket, and the side cutters must be removed prior to excavation. However, if within 24 inches of the outer edge of the pipe (this “tolerance zone”
extends on all sides of the pipe), only hand excavation, air cutting, and vacuum excavation are permitted.

2.6 No excavations shall be made on land adjacent to the pipeline that will in any way impair, withdraw lateral support, cause subsidence, create the accumulation of water, or cause damage to the pipeline or right-of-way.

2.7 The Crossing Party shall ensure all excavation work complies with OSHA’s excavation standards outlined in 29 CFR 1926 and correct any noncompliant excavation site before Buckeye’s On-Site Inspector or the Crossing Party enters the site to perform work.

2.8 If conditions require, the Crossing Party shall be directed by Buckeye to install sand or cement bags or other suitable insulating materials to maintain proper vertical clearance from the pipeline.

2.9 At any location where the pipeline is exposed, the Crossing Party shall provide Buckeye the opportunity to inspect the pipeline condition, install cathodic protection test leads, and/or install underground warning mesh.

2.10 The maximum unsupported exposed length of pipe shall be 20 feet for 4-inch-diameter pipe, 25 feet for 6-inch- to 10-inch-diameter pipe, and 35 feet for 12-inch- to 24-inch-diameter pipe. When required, the pipeline shall be supported with grout and sand bags or padded skids. At no time shall the pipeline be used as a brace to support equipment or sheeting/shoring materials.

Note: The Crossing Party shall submit a support plan for Buckeye’s review and approval.

2.11 No buried pipeline may be left exposed for any duration of time without concurrence of Buckeye’s On-Site Inspector.

2.12 Backfill and compaction shall be performed to the satisfaction and in the presence of Buckeye’s On-Site Inspector. At least 6 inches of fine, loose earth or sand with no sharp gravel, rock, hard clods, vegetation, or other debris shall be placed on all sides of any pipeline, and remaining backfill shall be placed so as not to disturb this padding material or damage the pipeline. Backfill over the pipe shall be compacted by hand until 18 inches of cover is achieved. The disturbed ground shall be compacted to the same degree of compaction of surrounding areas. The Crossing Party shall restore the site to its original condition except for items that are part of the Buckeye approved change.

3.0 Specific Guidelines

3.1 Cover, Grading, and Drainage

3.1.1 Cover and Grading:
   a. The existing cover over the pipeline shall not be modified without Buckeye’s written approval.
   b. The final grading shall net a minimum cover of 36 inches over the pipeline.
   c. In areas where buildings are proposed within 50 feet of the pipeline or due to other surface improvements and/or in areas determined by Buckeye, final grading shall net a minimum cover of 48 inches over the pipeline.
   d. The maximum allowable cover/soil shall not exceed six (6) feet without Buckeye’s written approval.
e. Use of vibratory equipment larger than walk-behind units is not permitted within 25 feet of the pipeline.

3.1.2 Drainage:
\[\text{\underline{a.}}\] Detention ponds, lakes, structures or any type of impoundment of water, temporary or permanent, are prohibited within the right-of-way.
\[\text{\underline{b.}}\] Culverts are not permitted within the right-of-way.
\[\text{\underline{c.}}\] Any modifications to an existing drainage pattern shall be designed such that the erosion of the pipeline cover is controlled.
\[\text{\underline{d.}}\] For streams, drainage channels, and ditches, a minimum of cover of 60 inches is required between the pipeline and the bottom of the drainage canal or ditch (see Section 3.3.1.f for road drainage ditches).

3.2 Aboveground and Underground Structures

3.2.1 General Requirements:
\[\text{\underline{a.}}\] Buildings or other structures, including, but without limitation, overhanging balconies, patios, decks, swimming pools, wells, walls, septic systems, propane tanks, transformer pads, or the storage of materials which creates an obstruction or prevents the inspection of the right-of-way by air or foot, shall not be erected within the right-of-way.
\[\text{\underline{b.}}\] The Crossing Party shall not develop or build retaining walls, drive piling or sheeting, or install an engineered structure that develops or controls overburden loads that will impact the pipeline (see Section 3.9).
\[\text{\underline{c.}}\] Deep foundations which include piers, caissons, drilled shafts, bored piles, and cast-in-situ piles located within 500 feet of the pipeline shall be installed/drilled using an auger.
\[\text{\underline{d.}}\] Occupied structures shall not be located within 50 feet of the pipeline unless a minimum cover of 48 inches is provided above the top of the pipeline.
\[\text{\underline{e.}}\] Any deviation for aboveground and underground structures will be reviewed by Buckeye on a case-by-case basis.

3.2.2 Gardening and Landscaping:
\[\text{\underline{a.}}\] Trees or large shrubs and bushes are not permitted within the right-of-way. Trees planted outside of the right-of-way should be placed so branches and limbs will not overhang the pipeline right-of-way as the tree matures. Buckeye may trim/remove overhanging branches and limbs that encroach into the right-of-way.
\[\text{\underline{b.}}\] Flowerbeds, vegetable gardens, lawns, and low shrubbery not exceeding 30 inches are permitted within the right-of-way. Buckeye is not responsible for replacing any plantings located within the right-of-way.

3.2.3 Fences and Walls:
\[\text{\underline{a.}}\] All fence installations within the right-of-way will be reviewed for approval by Buckeye on a case-by-case basis.
\[\text{\underline{b.}}\] Fences that impede access to the right-of-way are not permitted without Buckeye’s written approval. Upon Buckeye’s approval, fences shall be constructed with a 14-foot gate or removable sections across the right-of-way.
\[\text{\underline{c.}}\] Fence posts shall not be installed within 5 feet of the pipeline and must be equidistant if crossing the pipeline.
\[\text{\underline{d.}}\] No fence shall cross the right-of-way at less than a 60-degree angle.
\[\text{\underline{e.}}\] Fences that run parallel to the pipeline shall be installed outside the right-of-way.
\[\text{\underline{f.}}\] Masonry, brick, or stone walls are not permitted on the right-of-way.
3.3 **Roads, Driveways, Sidewalks, and Parking Areas**

3.3.1 **General Requirements:**

a. Roads, driveways, sidewalks, or parking areas shall not be constructed across the right-of-way without Buckeye’s written approval. Upon Buckeye’s approval, roads, driveways, and sidewalks shall cross perpendicular to the pipeline.

b. The maximum allowable cover shall not exceed six (6) feet without Buckeye’s written approval.

c. Use of vibratory equipment larger than walk-behind units is not permitted within 25 feet of the pipeline.

d. Roads or driveways shall not be installed longitudinally within the right-of-way.

e. For roads and driveways, a minimum cover of 48 inches with a net cover of 36 inches of undisturbed soil is required above the pipeline.

f. A minimum cover of 36 inches over the pipeline is required at road drainage ditches. Upon Buckeye’s approval, this cover can be reduced to 24 inches if ditch is rock/rip-rap lined and 12 inches if ditch is concrete lined.

g. For asphalt parking lots and sidewalks, a minimum cover of 36 inches with a net cover of 24 inches of undisturbed soil is required above the pipeline. Additional cover may be required by Buckeye based upon specific site conditions.

3.4 **Foreign Utility Crossings**

3.4.1 **General Requirements:**

a. Utilities shall cross perpendicular to the pipeline.

b. Utilities are required to cross beneath the pipeline with a minimum clearance of 24 inches. Exceptions to Buckeye’s clearance requirements for underground service entrances to single family dwellings will be reviewed on a case-by-case basis.

c. Sand or select fill shall be placed between the pipeline and utility (see Section 2.8).

d. Utilities installed parallel to the pipeline shall be reviewed by Buckeye on a case-by-case basis. If approved, the utility shall be no closer than 15 feet from the pipeline.

e. Warning tape, in accordance with A.P.W.A. Uniform Color Code, shall be placed above utility, 12 inches below ground, for a distance of 25 feet on either side of crossing.

f. Signage shall be placed at crossing as determined appropriate by Buckeye.

g. **Trenchless Excavations:**

[1] Utilities installed by a trenchless excavation method (directional drilling, jacking, slick boring, etc.) shall be reviewed by Buckeye on a case-by-case basis.

[2] Buckeye reserves the right to select the method of crossing for the proposed utility.

[3] A minimum clearance of 60 inches (5 feet) below the pipeline is required.

[4] For directional drilling operations, a surface wire tracking system is required to verify the exact location of the drill head.

[5] A 4 feet by 4 feet excavation window, 24 inches below the pipeline is required for visual inspection of the pipeline to ensure the drill (or bore) does not impact the pipeline.

3.4.2 **Metallic Utilities:**

a. Bonds and test leads shall be installed at the expense of and by the Crossing Party where Buckeye deems necessary.

b. Utilities shall be coated with a non-conductive coating for a distance of 50 feet on either side of the pipeline crossing.
c. Ductile water pipe shall include nitrile gaskets within 50 feet of the pipeline crossing or anywhere within 25 feet of horizontal offset locations.

3.4.3 Non-Metallic Utilities:
   a. Utilities shall be wrapped with tracer wire within the width of the right-of-way.
   b. Natural gas (or other industrial gases) lines shall be encased in a 6-inch envelope of yellow 2,000 psi concrete across the right-of-way.
   c. PVC water pipe shall include nitrile gaskets within 50 feet of the pipeline crossing or anywhere within 25 feet of horizontal offset locations.

3.5 Electrical, Fiber-Optic, and Communications Cables

3.5.1 General Requirements:
   a. Cables shall cross perpendicular to the pipeline.
   b. Cables installed parallel to the pipeline shall be reviewed by Buckeye on a case-by-case basis. If approved, the cable shall be no closer than 15 feet from the pipeline.
   c. Splice boxes, service risers, energized equipment, etc., are not permitted within the right-of-way.

3.5.2 Buried Cables:
   a. Cables are required to cross beneath the pipeline with a minimum clearance of 24 inches. Exceptions to Buckeye’s clearance requirements for underground service entrances to single family dwellings will be reviewed on a case-by-case basis.
   b. Sand or select fill shall be placed between the pipeline and cable (see Section 2.8).
   c. All cables shall be installed in Schedule 80 PVC pipe and encased in a 6-inch envelope of red 2,000 psi concrete (orange for fiber) across the right-of-way.
   d. Warning tape, in accordance with A.P.W.A. Uniform Color Code, shall be placed above the utility, 12 inches below ground, for a distance of 25 feet on either side of the crossing.
   e. Signage for the crossing shall be placed as determined appropriate by Buckeye.
   f. Trenchless Excavations:
      [1] Utilities installed by a trenchless excavation method (directional drilling, jacking, slick boring, etc.) shall be reviewed by Buckeye on a case-by-case basis.
      [2] Buckeye reserves the right to select the method of crossing for the proposed utility.
      [3] A minimum clearance of 60 inches (5 feet) below the pipeline is required.
      [4] For directional drilling operations, a surface wire tracking system is required to verify the exact location of the drill head.
      [5] A 4 feet by 4 feet excavation window, 24 inches below the pipeline is required for visual inspection of the pipeline to ensure the drill (or bore) does not impact the pipeline.

3.5.3 Aboveground Cables:
   a. A minimum of 20 feet of above-grade clearance for a distance of 25 feet on each side of the pipeline is required.
   b. Mechanical supports and service drops including poles, towers, guy wires, ground rods, anchors, etc., are not permitted within 25 feet of the pipeline.
3.6 **Temporary Access Roads and Heavy/Construction Vehicle Crossings**

3.6.1 **General Requirements:**

a. Trucks carrying a maximum axle load up to 15,000 pounds may cross the right-of-way after Buckeye has confirmed a minimum cover of 48 inches over the pipeline.

b. For all other cases, earthen ramps (see Attachment 6), swamp mats, reinforced-concrete slabs (see Attachment 5), or steel plates may be required. Loading conditions and protection measures will be evaluated and dictated by Buckeye’s Engineering Department.

c. During the use of an approved temporary construction road, Buckeye may require that the Crossing Party provide additional protective measures deemed necessary to prevent damage to the pipeline.

d. Buckeye will limit the number of temporary construction roads constructed by the Crossing Party.

3.7 **Railroad Crossings**

3.7.1 **General Requirements:**

a. A minimum clearance of 72 inches is required between railroad tracks and the pipeline.

b. A minimum cover of 36 inches is required between the bottom of drainage ditches on either side of a railroad and the pipeline.

c. For railroad main lines, the pipeline crossing must comply with local railroad guidelines that delineate the requirements for carrier pipe, casing pipe, and clearances. Buckeye shall be consulted for the review of any State submittals.

d. For private spur crossings, Buckeye will determine the railroad entity having jurisdictional authority to dictate crossing requirements.

3.8 **Farming and Field Tile**

3.8.1 **General Requirements:**

a. Field tile running parallel to the pipeline shall be spaced 10 feet from the centerline of the pipeline.

b. Field tile shall cross the pipeline perpendicularly with a clearance of 12 inches above or below the pipeline.

c. Buckeye will approve the total number of crossings of the pipeline on a case-by-case basis.

d. Deep plowing or “ripping” operations shall be approved by and coordinated with Buckeye.

3.9 **Construction-Induced Vibrations**

3.9.1 **General Requirements:**

a. Construction activities that generate ground vibrations, including, but without limitation, pile driving, sheet driving, soil compaction work, jackhammering, or ramming, shall be reviewed by Buckeye on a case-by-case basis.

b. If the Crossing Party anticipates such an activity within 300 feet of the pipeline, then continuous testing monitored by a seismograph located directly over the pipeline at its closest point to the activity must be conducted. The Crossing Party shall provide, at their expense, the monitoring service which must be approved by Buckeye.
c. The particle velocity of any one component of a three-component seismograph must not exceed 2.0 inches per second as recorded on the seismograph placed directly over the pipeline.

3.10 Blasting Operations

3.10.1 Blasting within 500 feet of the pipeline right-of-way:

a. The Crossing Party must submit a blast plan to Buckeye for review and approval. Verbal and written notice will be given 14 and 21 days respectively.

b. Blasting plans must include the following information:

- Dates blasting to occur
- Explosives type
- Maximum shot hole depth and diameter
- Number of holes and spacing
- Delay pattern
- Delay types and intervals
- Depth of overburden
- Depth of blast area
- Maximum charge per hole, per delay
- Show drilling/blasting pattern plan and profile in relation to Buckeye facilities
- Calculated radiant peak particle velocity (PPV) at varying distances from the pipeline and at the pipeline itself
- State permit (copy)
- Blasting contractor qualifications and insurance certificate (copy)
- Blasting Safety Plan (copy)

The Crossing Party shall complete Attachment 7, “Blasting Plan Submission Form”, and include this form with their submission to Buckeye.

c. The Crossing Party shall make arrangements for a Buckeye On-site Inspector to be present to witness the blasting operation.

3.10.2 Blasting within 300 feet of the pipeline right-of-way:

(Adds to or replaces items in Section 3.10.1)

a. Blasting shall be monitored by a seismograph located directly over the pipeline at its closest point to the blast hole(s). The Crossing Party shall provide, at their expense, the monitoring service which must be approved by Buckeye.

b. The particle velocity of any one component of a three-component seismograph must not exceed 2.0 inches per second as recorded on the seismograph placed on the ground directly over the pipeline.

c. For blast testing, an initial test blast using a maximum charge of one pound shall be performed. The Crossing party shall detonate the first test blast with all necessary monitoring equipment in place to observe the results of the proposed blast design. Each subsequent test blast may be set and detonated only after the seismograph reading from the previous test blast indicates that further blasting can be safely conducted.

d. Routine production blasting may be initiated after completion of a successful test blast, with allowable charge based on the seismographic vibration recordings of test blasts. However, all blasting must be continuously monitored by a seismograph. The velocity recorded must not exceed the 2.0 inches per second limit noted above.
3.10.3 **Blasting within 50 feet of the pipeline right-of-way:**
(Adds to or replaces items in Section 3.10.2)
   a. The Crossing Party shall hire a consulting firm that specializes in underground blasting to conduct the seismograph survey and certify the results.
   b. Buckeye will approve the Crossing Party’s selection of consulting firms that will conduct the seismographic surveys before starting any blasting operation.

3.10.4 **Special Requirements:**
   a. For multiple-delay blasting, the Crossing Party shall begin the blasting sequence at the charge closest to the pipeline and progress away from the pipeline.
   b. If seismographic readings above the limit stated in item 3.10.2.d of this section are recorded, the pipeline must be exposed and inspected for possible damage and/or product release. The Crossing Party conducting blasting operations is responsible for all expenses related to the exposure and any subsequent repairs necessitated by the operation.
   c. At Buckeye’s request, the Crossing Party shall install sheet piling, open trench channels, and/or matting to protect the pipeline during blasting operations.

3.11 **Seismic Vibrating Operations**

3.11.1 **Seismic vibrating within 500 feet of the pipeline right-of-way:**
   a. The Crossing Party must submit a seismic vibrating plan to Buckeye for review and approval. Verbal and written notice will be given 14 and 21 days respectively.
   b. Seismic vibrating plans, when using Vibroseis System Vibrators to radiate ground vibrations, must include information on soil conditions and depth of exploration, the anticipated number and type of vibrations, type and weight of vehicle, and peak force of equipment.
   c. The peak force by vehicle weight shall not exceed 45,000 pounds.
   d. The Crossing Party shall also make arrangements for a Buckeye On-Site Inspector to be present to witness the seismic vibrating operation.

3.11.2 **Seismic vibrating within 100 feet of the pipeline right-of-way:**
   a. Vibration shall be monitored by a seismograph located directly over the pipeline at its closest point to the vibrator(s). The Crossing Party shall provide, at their expense, the monitoring service which must be approved by Buckeye.
   b. The Crossing party shall determine and limit the maximum peak force allowed under continuous seismographic vibration monitoring such that the peak particle velocity will not exceed 2.0 inches per second.
   c. Seismic vibration surveys shall not be conducted closer than 100 feet to the pipeline.

3.11.3 **Special Requirements:**
   a. If seismographic readings above the limit stated in item 3.11.2.b of this section are recorded, the pipeline must be exposed and inspected for possible damage and/or product release. The Crossing Party conducting seismic vibrating operations is responsible for all expenses related to the exposure and any subsequent repairs necessitated by the operation.
   b. At Buckeye’s request, the Crossing Party shall install sheet piling and/or open trench channels to protect the pipeline during seismic vibrating operations.
4.0 Deviations and Exceptions

4.1 When and where special circumstances dictate, deviation from these requirements must be formally approved by Buckeye in writing prior to commencement of any excavation or other construction activity that may impact the pipeline. Any such deviations must be explained and documented and provided to Buckeye for review and approval.

5.0 Additional Information and Buckeye Contacts

5.1 Should you have any questions regarding pipeline rights-of-way or your specific easement, contact Buckeye’s Right of Way Department at the applicable phone number listed in Attachment 2.

5.2 Should you have any questions regarding Buckeye’s engineering requirements, contact Buckeye’s Design Reviewer at the phone number also listed in Attachment 2.

Attachment 4:

Requirements for Submission of Design Plans
Buckeye Partners, L.P. and Affiliates

1. Contact Buckeye’s local Field Operations Manager to arrange for a field determination by probe hole(s) of the vertical and horizontal locations of the pipeline(s). Arrange for your Surveyor to meet with Buckeye’s Field Representative on-site in order to record this information for incorporation into your design plans. This locating service can be scheduled by contacting the Buckeye facility near your location (see Attachment 1).

   Note: At Buckeye’s request, you will be required to provide excavation equipment (at your expense) in order to assist Buckeye’s Field Representative in accurately locating the pipeline.

2. The location of each probe hole along with the corresponding depth of the pipeline(s) shall be recorded by your Surveyor. Buckeye’s local Field Representative will consider site conditions and pipeline(s) location to determine the number of and distance between probe holes. As a minimum, the pipeline(s) shall be located at each proposed road or utility crossing, drainage channel or ditch, and other areas of proposed grade change within the pipeline right-of-way.

3. Using the probe hole data, accurately show Buckeye’s pipeline(s) on your design plans. Include all reference and location information for each probe hole on your design plan, including the date and name of Buckeye’s Field Representative who performed the field work.

4. The pipeline and probe hole data must be shown on individual drawings depicting the existing site conditions and the proposed site conditions. Highlight the pipeline(s) in yellow. In your plan transmittal letter, identify/list all of the drawing sheets that show the pipeline(s).

5. Buckeye’s pipeline shall be indicated on all applicable plan sheets by pipe diameter and labeled, “High Pressure Petroleum Products Pipeline”.

6. Add Buckeye to the Utilities List and include the Buckeye ROW Agent’s name and phone number on the plans.

7. Indicate the following information on your design plans: [1] ground disturbances (blasting, seismic testing, pile driving, jackhammering, etc.) within 1,500 feet of the pipeline(s); [2] proposed location(s) where construction equipment will cross the pipeline right-of-way; [3] structure setback distances from the pipeline right-of-way; [4] proposed landscaping within 25 feet of either side of the pipeline(s); and [5] any permanent fencing that will limit/encumber Buckeye’s access to the pipeline right-of-way.
8. If the drainage pattern of the existing site will be altered in any way that impacts the pipeline right-of-way because of your project, submit a drainage plan that specifically identifies new flow paths and all inlet/outfall/collection points.

9. Include/incorporate Buckeye's Right-of-Way Use Restrictions specifications (attached hereto) as a part of your final design plans. This can be done by adding a drawing sheet to your plans and appending (cut and paste) the Specification onto this sheet.

10. For property improvements that involve grade/pavement alterations, road work (new construction or improvements of existing), utility crossings (buried and overhead), or other subsurface or on-surface structure installations within Buckeye's right-of-way:

   a. Prepare a separate plan and profile drawing of Buckeye's pipeline(s) for the existing and the proposed conditions for your project.

   b. Include subgrade details that show materials and the thickness of each layer/course.

   c. Indicate the amount of existing cover that will be removed from the pipeline(s). Indicate the amount of cover that will be added over the pipeline(s). Indicate the proposed finished/final grade amount of cover over the pipeline(s).

   d. Show the clearances between Buckeye's pipeline(s) and any existing and new buried or overhead utilities that cross the pipeline right-of-way.

   e. Show the clearances between Buckeye's pipeline(s) and each proposed substructure at the two closest reference points.

   f. For any utility to be installed via boring, drilling, or tunneling, include a detailed procedure of this work with your design plans. Note: “Blind” boring is not permitted. Buckeye’s pipeline(s) must be exposed during the bore operation to ensure that the bore head crosses safely underneath the pipeline(s).

   g. Indicate any areas of disturbance or other work that will require Buckeye's pipeline(s) to be exposed in order to perform your work.

11. Complete the following “Design Plans Submission Checklist”, sign, date, and include with your design plans submittal. Mail three full sized sets of design plans to Beth Auman, Senior Right-of-Way Specialist (see Attachment 2).

Our project involves the following impacts to Buckeye’s facilities:

☐ Cover, grading, and drainage pattern changes
☐ Aboveground and/or underground structures
☐ Road, driveway, sidewalks, and parking areas
☐ Utility crossings including gas, water (steam), sewer (storm & sanitary)
☐ Electrical, fiber-optic, and communications cables
☐ Temporary access roads for the crossing of heavy/construction equipment
☐ Railroad crossings
☐ Farming and field tile
☐ Construction-induced vibrations
☐ Blasting operations (attach BLASTING PLAN)
☐ Seismic vibrating operations (attach SEISMIC VIBRATING PLAN)
☐ Exposure of the pipeline (attach SUPPORT PLAN)
☐ Boring, drilling, or tunneling near the pipeline (attach DRILL PLAN)

- Density of Rock (lbs/cu-ft): _______________ Directly above pipeline (in/sec): _______________

## ATTACHMENT CHECKLIST

- Drilling/Blasting Pattern Sketch - include all depths, measurements, and delay patterns relative to Buckeye facility involved and each charge.
- State Approval Letter
- Blasting Contractor’s Qualifications
- Blasting Contractor’s Insurance Certificate
- Blasting Contractor’s Safety Plan

**OMISSION OF ANY INFORMATION REQUESTED ABOVE WILL DELAY YOUR BLASTING PLAN REVIEW**

Buckeye requires a minimum of 14 days for technical review upon receipt of complete and accurate blasting plans.
Attachment 8: Excavation Safety Checklist
195 F-09, FORM A - EXCAVATION SAFETY CHECKLIST

The information noted on this form is intended to communicate general information about our pipeline(s) and is not intended to be solely relied upon by any party for the purpose of excavation or any similar purpose.

By law, to enable all participating utilities time to mark their facilities, the One Call Center in your state requires notification by calling 811 prior to any excavation. Buckeye Partners, L.P. is a member of this One Call enterprise and will automatically be notified through this system. In addition, a Buckeye inspector will perform and/or review with the excavator representative the applicable checklist items below.

Pipeline Locate Activity:
- If plans are available, requested a copy of the written project plans and drawings for review with the excavator and/or engineer. Had the excavator and/or engineer explain the extent of the work area, location and depth of the excavation, type of proposed utilities, location of proposed utilities, number of utility crossings, etc.
- Established the pipeline(s) location and marked the line(s) per state One Call requirements throughout the entire work area.
- Photographed all established pipeline markings throughout the work area.

Communication with the Excavator and/or Engineer:
- The excavator and/or engineer was advised that a Buckeye inspector must:
  - Monitor the excavation site daily when work is performed within 25 feet of a Buckeye pipeline.
  - Observe continuously all excavation and backfill activity performed within 10 feet of a Buckeye pipeline or during the installation of any utility across a Buckeye pipeline facility.
  - In addition, the excavator was instructed to call 800-331-4115 if they were ready to excavate within either above distance of a Buckeye pipeline and a Buckeye inspector was not present. When called a Buckeye inspector will be sent to perform the inspection, which is free of charge.
- The excavator was advised that only backhoes or trackhoes with a steel plate welded across the teeth of the bucket are permitted to be used during excavation work around a Buckeye pipeline.
- The excavator was advised that the Buckeye inspector is required by law to perform an external inspection of any Buckeye pipeline exposed during excavation activity. The excavator understands that he/she is responsible to provide an OSHA compliant excavation, allowing the Buckeye inspector safe ingress and egress to examine our exposed pipeline.
- Walked through the work area with the excavator and communicated the locations of all Buckeye pipelines in the planned work area.
- Discussed the number of pipelines, pipe size(s), approximate pressures, approximate depths, excavation tolerance zones, hand digging requirements, and the hazards and characteristics of product(s) in the pipeline system(s) located in the planned work area.
- The excavator was advised to call the One Call Center 811 or contact Buckeye, if the Buckeye markings are destroyed or need to be refreshed in the planned work area. This service is provided free of charge.
- The excavator was advised that before any exposed Buckeye pipeline can be backfilled, the Buckeye inspector will direct the placement of an orange warning mesh over the pipeline.
- The excavator was advised that any contact with the pipeline, pipeline coating, test station wiring, or anode beds must be reported to Buckeye prior to backfilling the excavation to permit further inspection of the damage to assure continued safe pipeline operations.
- The excavator was advised that failure to comply with the conditions outlined above would result in Buckeye requiring the excavator to expose the pipeline again to allow an examination of the pipeline at the excavator’s expense. If damage to the pipeline is discovered, Buckeye may seek monetary compensation for all repair costs. Buckeye may also report this activity to all concerned parties (State One Call Center, Regulatory Agencies, Principal Contractor, Excavator’s Insurance Company, etc.).

If you are unable to reach the representative designated below, or in case of an emergency, request assistance as follows:
For excavation activities in CT, FL, IL, IA, IN, MA, ME, MI, MO, NJ, NY, OH, PA, and WI, please call 1-800-331-4115.
For excavation activities in LA, NV, TN, TX, AL, GA, NC, and Southern California, please call 1-866-514-8380.
For excavation activities in Northern California, please call 1-800-307-1107.
