1.0 Project Summary

In accordance with conditions of Term Agreement D030924, Lu Engineers conducted an asbestos sampling survey on the Paul Road Bridge over Interstate 490 (Eastbound) (BIN 1095550). Based on information obtained using the procedures described in Section 3.0 Inspection Procedures, the following summarizes the results of this investigation.

BIN 1095550 – Paul Road Bridge over Interstate 490 (Eastbound) Confirmed Asbestos-Containing Materials (ACMs)

Based on laboratory analyses of bulk samples collected, the following materials were determined to contain asbestos:

Confirmed ACMs

<table>
<thead>

</table>

LF = Linear Feet  
SF = Square Feet

Inaccessible/Assumed ACMs

No other inaccessible/assumed ACMs were identified.

2.0 Site Description

The Site is located in the Town of Chili, New York. For the purpose of this report, the Site consists of BIN 1095550 – Paul Road Bridge over Interstate 490. The site is indicated on the attached Figure 1 – Site Location Map.

3.0 Inspection Procedures

The following procedures were used to obtain the data for this Report:

A. A review of record drawings supplied by Region 4 personnel and a visual inspection of the subject structure were conducted to identify potential visible/accessible sources of asbestos-containing materials. Observations and notes were made to provide a description of the structure, and an estimate of the approximate amount, length, or area of ACM present.
B. Physical or operational constraints, which might affect the removal of the ACM, were identified and reported.

C. Bulk samples of suspected ACMs were collected during the site inspection of the subject structure. Samples were taken from each homogeneous area that may contain ACM, including the paint system. The investigation was limited to areas of the bridge that could be accessed from the bridge itself or reached from the ground and/or by use of a ladder from below. The approximate location of bulk samples is indicated on Figure 2, Asbestos Bulk Sample Location Plan.

D. Samples were submitted for analysis. Preliminary polarized light microscopy (PLM) analyses of non-friable, organically bound (NOB) materials were performed by Paradigm Environmental Services, a NYSDOH approved laboratory, to determine the presence and percentage of asbestos in each sample. Transmission electron microscopy (TEM) analyses of NOB materials, if necessary, were performed by Paradigm Environmental Services.

E. Lab results were used to determine the approximate location, type, and amount of the verified ACM.

Only accessible areas were inspected. Inaccessible areas, such as areas within the bridge or the approaches to the bridge were not included in this inspection. No investigation was conducted by Lu Engineers to determine the presence of underground utilities on or in the immediate vicinity of the Site.

4.0 Results

BIN 1095550 – Paul Road Bridge over Interstate 490 (Eastbound)

Confirmed Asbestos-Containing Materials (ACMs)

Sheet Packing
Asbestos-containing black sheet packing is located in the horizontal joint between the abutment and the bridge deck slab at both ends of the bridge. Most of this material is presently covered by the bridge deck, although the edges of this sheet packing are exposed and visible at various locations.

It is estimated that the total amount of this asbestos-containing sheet packing material on the bridge is approximately 90 square feet. The approximate locations of this asbestos-containing sheet packing are shown in Figure 2.

Inaccessible/Assumed ACMs

No other inaccessible/assumed ACMs were identified.
Certification

Lu Engineers certifies the accuracy of this report, to the best of our knowledge, based on the information collected as described in the Inspection Procedures Section of this report.

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCCR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project work site. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.
