
The surface of the barrier shall be smooth and of the same surface straightness when checked with a 508 mm straight-edge, and shall not be out of plumb by more than 5 mm. The exterior dimensions shall not vary from the dimensions shown by more than 3 mm per 2000 mm of barrier length. The barriers shall be used in pairs with the faces between the pads and two leapers shall be shown as in the attached drawings.

The interior dimensions shall be 50 mm minimum and the vertical dimensions shall be equal to the nearest mm. The interior dimensions shall not vary from the dimensions shown by more than 3 mm per 2000 mm of barrier length. The barriers shall be used in pairs with the faces between the pads and two leapers shall be shown as in the attached drawings.
