Title: SECTION 737 – GEOSYNTHETICS

ADMINISTRATIVE INFORMATION:
- This Engineering Instruction (EI) is effective beginning with projects submitted for the letting of May 3, 2012.
- This EI modifies EI 10-025.
- The revisions issued with this EI will be incorporated into the next update of the Standard Specifications.

PURPOSE: The purpose of this EI is to revise Section 737 Geosynthetics; specifically to revise the material requirements for §737-01 Geotextiles and issue the new §737-09 Geosynthetic Fibers.

TECHNICAL INFORMATION:

Silt Fences:
- Note 1 in Table 737-01G was amended to provide the required strength of the additional support element for supported silt fence installations, particularly the strength of the prefabricated polymeric mesh.
- A silt fence utilizes either a woven or non-woven geotextile, which may either include an additional support element or be unsupported when installed in the silt fence application.
- Unsupported silt fence geotextile has a minimum strength requirement of 123 lbs force in the Machine Direction (MD) and a minimum strength requirement of 101 lbs force in the Cross-Machine Direction (XD).
- To determine the allowable post spacing for an unsupported silt fence, the geotextile’s percent elongation is determined following ASTM D4632. If the percent elongation is less than 50%, the post spacing can be up to 6.5 feet apart. However, if the percent elongation is equal to or greater than 50%, the post spacing can be no more than 4.0 feet.
- Geotextiles which fail to meet the strength requirements for unsupported silt fence but achieve a minimum grab strength of 90 lbf in both the Machine Direction (MD) and the Cross-Machine Direction (XD) can be used as silt fence but an additional support element is required to be installed in the assembly. Supported silt fence shall consist of either 14 gage steel wire with a mesh spacing of 6 in. x 6 in. or prefabricated polymeric mesh.
- The Department maintains an Approved List for Geotextiles, under Geosynthetics for Highway Construction at: https://www.dot.ny.gov/divisions/engineering/technical-services/technical-services-repository/alme/pages/470-1a.html, which identifies approved silt fence geotextiles.

Geosynthetic Fibers:
- §737-09 Geosynthetic Fibers is being added to provide the material requirements for geosynthetic fibers.
Geosynthetic fibers are expandable polypropylene strands that, when mixed with soils, have shown the ability to somewhat increase its bearing capacity and shear strength. Typical mixtures vary between 0.1 and 0.4% by weight.

IMPLEMENTATION:
- The Main Office Design Quality Assurance Bureau will insert these standard specification revisions into contract proposals beginning with projects submitted for the letting of May 3, 2012.

TRANSMITTED MATERIALS: This EI transmits material requirement revisions to Standard Specification Section 737 Geosynthetics. Both Metric and U.S. Customary revisions are attached.

BACKGROUND: The general term geosynthetics encompasses the subfamilies of geotextiles, geogrids, geocells, geomembranes, and geocomposites. Various construction practices incorporate geosynthetics to take advantage of their properties and ease of installation. Geosynthetics have six primary functions: filtration, drainage, separation, reinforcement, fluid barrier, and protection. The type of geosynthetic used on a particular project will depend on its intended primary function in the installation, and thus its critical properties.

Silt Fences:
A silt fence is a geotextile used as a temporary structure to remove suspended particles from runoff water from construction sites. The silt fence installation attempts to maximize flow of water through the geotextile, while retaining the maximum amount of sediment.

Geosynthetic Fibers:
Geosynthetic fibers are expandable polypropylene strands used to stabilize soils.

CONTACT: Questions or comments regarding this issuance should be directed to Randall J. Romer, P.E., of the Geotechnical Engineering Bureau at (518) 457-4714, or via e-mail at rromer@dot.state.ny.us. Questions or comments regarding the technical aspects of the revision to the Standard Specification should be directed to James Curtis, of the Geotechnical Engineering Bureau at (518) 457-4735, jcurtis@dot.state.ny.us.
Make the following changes to the Standard Specifications dated May 4, 2006 as modified by EI 10-025:

**Delete** §737-01 Geotextiles; Material Requirements; “G. Silt Fence” entirely and **Replace** it with the following:

**G. Silt Fence.** Silt fences shall meet the requirements of Table 737-01G.

<table>
<thead>
<tr>
<th>Application</th>
<th>Geotextile Structure</th>
<th>Minimum Strength Class Requirements</th>
<th>Silt Fence Class Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>

</tbody>
</table>

**Table 737-01G Notes:**

1. Silt fence support shall consist of either 14 gage steel wire with a mesh spacing of 150 mm x 150 mm or prefabricated polymeric mesh with a minimum ultimate tensile strength of 2920 N/m in both machine and cross machine directions measured in accordance with ASTM D6637.

2. As measured in accordance with ASTM D4632.

Add the following:

**737-09 GEOSYNTHETIC FIBERS**

**SCOPE.** This specification covers the material requirements and methods of testing geosynthetic fibers used in highway construction.

**GENERAL.** Submit the geosynthetic fiber material certification with the material. Include in the certification the geosynthetic fiber manufacturer’s name, the geosynthetic fiber name, the test lot number, the polypropylene percentage, fiber length, specific gravity, carbon black content, tensile strength, tensile elongation and Young’s modulus.

**MATERIAL REQUIREMENTS.** Geosynthetic fibers shall consist of fibrillated polypropylene strands and shall be tested and certified to meet the minimum requirements listed in Table 737-09 *Geosynthetic Fiber Requirements*.

<table>
<thead>
<tr>
<th>Property</th>
<th>Test Method</th>
<th>Requirement</th>

<td>ASTM D2101</td>
<td>4827 MPa minimum</td>
</tr>
</tbody>
</table>

**BASIS OF ACCEPTANCE.** Geosynthetic fibers will be accepted on the basis of

1. A material certification identifying:
   a. The geosynthetic fiber manufacturer’s name,
   b. The geosynthetic fiber name,
   c. The test lot number,
   d. The polypropylene percentage,
   e. The fiber length,
   f. The specific gravity,
   g. The carbon black content,
   h. The tensile strength,
   i. The tensile elongation, and
   j. Young’s modulus.

2. An evaluation that the information on the material certification meets the minimum requirements for the geosynthetic fiber stated in Table 737-09 *Geosynthetic Fiber Requirements* and the contract documents.
Make the following changes to the Standard Specifications dated May 1, 2008 as modified by EI 10-025:

Delete §737-01 Geotextiles; Material Requirements; “G. Silt Fence” entirely and Replace it with the following:

**G. Silt Fence.** Silt fences shall meet the requirements of Table 737-01G.

<table>
<thead>
<tr>
<th>Application</th>
<th>Geotextile Structure</th>
<th>Minimum Strength Class Requirements</th>
<th>Silt Fence Class Requirements</th>
</tr>
</thead>

<td>$&lt; 50%$ $^2$</td>
<td>123</td>
</tr>
<tr>
<td></td>
<td>101</td>
<td></td>
<td>101</td>
</tr>
</tbody>
</table>

Table 737-01G Notes:

1. Silt fence support shall consist of either 14 gage steel wire with a mesh spacing of 6 in. x 6 in. or prefabricated polymeric mesh with a minimum ultimate tensile strength of 200 lb/ft in both machine and cross machine directions measured in accordance with ASTM D6637.

2. As measured in accordance with ASTM D4632.

SECTION 737 – GEOSYNTHETICS

Add the following:

737-09 GEOSYNTHETIC FIBERS

SCOPE. This specification covers the material requirements and methods of testing geosynthetic fibers used in highway construction.

GENERAL. Submit the geosynthetic fiber material certification with the material. Include in the certification the geosynthetic fiber manufacturer’s name, the geosynthetic fiber name, the test lot number, the polypropylene percentage, fiber length, specific gravity, carbon black content, tensile strength, tensile elongation and Young’s modulus.

MATERIAL REQUIREMENTS. Geosynthetic fibers shall consist of fibrillated polypropylene strands and shall be tested and certified to meet the minimum requirements listed in Table 737-09 Geosynthetic Fiber Requirements.

<table>
<thead>
<tr>
<th>Property</th>
<th>Test Method</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Polypropylene</td>
<td>ASTM D4101</td>
<td>99.4 % minimum</td>
</tr>
<tr>
<td></td>
<td>Group 1/ Class 1/ Grade 2</td>
<td></td>
</tr>
<tr>
<td>Fiber Length</td>
<td>Measured</td>
<td>1 inch</td>
</tr>
<tr>
<td>Specific Gravity</td>
<td>ASTM D792</td>
<td>0.033 lb/in³</td>
</tr>
<tr>
<td>Carbon black Content</td>
<td>ASTM D1603</td>
<td>0.6 % minimum</td>
</tr>
<tr>
<td>Tensile Strength</td>
<td>ASTM D2256</td>
<td>45 ksi minimum</td>
</tr>
<tr>
<td>Tensile Elongation</td>
<td>ASTM D2256</td>
<td>15 % maximum</td>
</tr>
<tr>
<td>Young’s Modulus</td>
<td>ASTM D2101</td>
<td>700 ksi minimum</td>
</tr>
</tbody>
</table>

BASIS OF ACCEPTANCE. Geosynthetic fibers will be accepted on the basis of

1. A material certification identifying:
   a. The geosynthetic fiber manufacturer’s name,
   b. The geosynthetic fiber name,
   c. The test lot number,
   d. The polypropylene percentage,
   e. The fiber length,
   f. The specific gravity,
   g. The carbon black content,
   h. The tensile strength,
   i. The tensile elongation, and
   j. Young’s modulus.

2. An evaluation that the information on the material certification meets the minimum requirements for the geosynthetic fiber stated in Table 737-09 Geosynthetic Fiber Requirements and the contract documents.
