Work Schedule

The project was awarded in February. Construction will begin with site preparation work in the Spring; this work and other activity not requiring closure of the bridge will continue until September. Until the bridge is closed, it will continue to carry alternating one-way traffic flows, with a vehicle weight limit of 15 tons.

Travelers should expect some disruptions to traffic flow prior to the closure, as movement of materials and equipment and other activity takes place.

The construction of the new Route 9P bridge over Saratoga Lake Outlet will require closure of this crossing from just after Labor Day 2010 to just before Memorial Day 2011.

This brochure provides information on the project construction schedule and the traffic plan which will be in effect during construction.
Traffic Management

The new bridge will be built on the site of the existing bridge. Thus, the crossing will be closed during construction.

While construction takes place, traffic will be directed to a signed detour route using Route 9P, Route 9 and I-87.

The detour route is shown on the map to the right. Signs will also be posted at key locations further away from the detour route to direct travelers to the most appropriate routes into or through the area.

NYSDOT has worked closely with the Towns of Saratoga and Stillwater and the City of Saratoga Springs to minimize the impacts of the bridge closure on nearby local streets. We will keep local officials and emergency responders advised of the progress of the construction work and of any changes to the work schedule.

All properties in the area will be accessible during construction.
